

Assignment 1: Personal Page

Name: Taohan Zhu

Project Description

This project aims at building a personal website for me to display my experiences, skills, and interests. I used a Bootstrap template as the boilerplate. Then, I adjusted the CSS to better display the HTML content that I hope to present. I also added a preloader component via Vanilla JS and CSS in case the components of the page take too long to load.

User Personas

- Abby - a recruiter located in California who hopes to find talented candidates for a tech company
- Bob - a engineer manager of a technology company who looks forward to hire a few engineers to fill their team
- Cathy - a student who just move to the Bay Area looking to make friends based on major and interests

User Stories

- As recruiter Abby, I want to use others' personal websites to know more about their coding capabilities, so that I could find the matching candidates quicker.
- As EM Bob, I want to use others' personal websites to understand candidates' experiences and skills, so that I would know if they fit my team or not.
- As student Cathy, I want to use others' personal websites to explore their interests, so that I could make friends with people that have common interests as me.
